

Electronic Plastic Rockwell Hardness Tester XHR-150

Description:

- XHR-150 Plastics Rockwell Hardness Tester has adopted a mechanism to load and unload the test force automatically, through rotating the load-change hand wheel to change test force; therefore the operation of this instrument is very simple; easy and prompt
- Setting zero to the dial, there is no man-made operation error. The present hardness tester is with high sensitivity and stability, so as to suitable usage in workshop and testing laboratory
- The method of plastics Rockwell hardness test is to press a ball indenter of a certain diameter into a specimen to be tested firstly with initial test force P and keep a stipulated duration time, then unload the main test force
- The difference between the press-in depth h1 during the initial test force keeping the press-in depth h0 made by the initial test force applied means the permanent increment of indentation depth. Each press-in depth 0.002mm is as one hardness unit of plastics rockwell
- This test method is with the characteristic of high speed to test hardness and it is widely applied in inspecting the hardness for specimens
